SOLD BY

ROBERT HOWARD & CO.,

Wholesale Manufacturers of

TIN, IRON, JAPANNED, COPPER, AND ZINC WARES,

AND

ORIGINAL PATENTEES—

OF

THE PATENT RAISED DISH COVERS.

~~~~~

### COPPER, TIN-PLATE, AND ZINC MERCHANTS.

~~~~~

115, OLD STREET, LONDON.

85

PRINTED BY J. H. BANKS, 24, LONDON STREET, FITZROY SQUARE.

1842.

457. Digitized by Google

Country Customers are requested to observe the following Directions.

To mention by what Wagon, Vessel, or other Conveyance, and to what Inn or Wharf they wish to have their Goods sent.

To return as many Baskets or Cases together as they can conveniently, and on the direction to add the Name and Address of the party sending them.

To prefer sending Orders direct, *per post*, as *delays frequently occur when they are sent by hand*, or when enclosed in packages.

N.B.—Old Metals will be taken in Exchange, delivered Free of all expenses. An Invoice of the weight should be enclosed.

When any Article or Empty Package is returned, or Old Metals delivered, it is *particularly requested* that the bearer will take back A VOUCHER, according to a printed form which will be given, signed by the party receiving the same.

A Catalogue of Iron Plate Braziers, Seamed Iron Goods, Cast Iron Hollow Ware, &c., &c., published by R. HOWARD & Co., in 1840, may likewise be had by their Customers, on application.

INDEX.

STAND N°11

OBSERVATIONS.

By this beautiful and scientific apparatus every thing good in the berry is extracted, without that disagreeable and deleterious bitter, which more or less flavors all Coffee, made by the common methods; at the same time, nothing is lost or wasted in the process, which is very expeditious in its operation. A clear, pure essence is produced, small in quantity at first, but of such strength, that it may be diluted with milk or water, to suit the various tastes, and yet retain proportionably the exquisite flavor.

To test the advantage of this process; after having made the Coffee according to the directions, re-fill the boiler, without disturbing the Coffee in the box, and subject it to a second operation, and the produce will at once establish the advantage of using an apparatus so efficacious and perfect in its action.

L

Directions for Use.

Take out the box, and fill the boiler with water through the pipe, "hot water is recommended, as it facilitates the operation." Fill the box with ground Coffee, spreading it level, without compressing it, then put on its perforated top, and replace the box. Place the Coffee Pot on the Lamp Stand, (or over a clear fire) and in a few minutes a rich darkly colored extract of the Coffee will be seen flowing over the top of the box; as soon as the extract assumes a pale color the operation is complete, it may then be diluted with boiling water to suit the palate, or hot milk used instead of the water, making *Café au Lait*.

The Patent Spirit Lamp for the above Coffee Pots is equally useful for Nursery Lamps, Tea Kettles, Grog Kettles, Shaving Pots, &c. and is so simple, as to require no directions.

THE ECONOMIC HOT-OIL LAMP.

PROTECTED BY
FOR ENGLAND, FRANCE,

LETTERS PATENT,
HOLLAND, AND BELGIUM

"In the above figure $A \wedge B B$ is a section of the cylinder which constitutes the oil cistern or reservoir, receiving heat from the flame of the lamp. D is a valve which is opened to allow the oil to descend to the wick, and is shut when the cistern or reservoir is to be separated from the pipe of supply E , for the purpose of re-charging it with oil. The flame is modified, not by raising or lowering the wick, as in common lamps, but by raising or lowering the bell-mouthed glass chimney which rests at its bottom, on three points, and is moved by means of the rack and pinion F . The cotton wick is very short and *stationary*, and a new one is put on every time the lamp is used."

DIRECTIONS FOR TRIMMING.

Close the valve, by drawing up the trigger, unscrew the reservoir, withdraw the plug G, and keeping it upright, fill it *quite full* in the usual way, and replace it. Then take out the used cotton, and put on a new one by the cotton stick, taking care not to ruffle or disturb its even edges, as the steadiness of the flame will depend greatly on this being attended to.

DIRECTIONS FOR LIGHTING.

Push down the trigger so that the oil may flow to the cotton and *thoroughly* soak it before lighting; this is *essential* to prevent the cotton from being charred: The cotton as soon as lighted, should be protected from burning down unevenly, by raising the glass holder until it is level with the top of the cotton. Then put on the chimney. The glass holder should remain up while the cotton is lighting all round, when it should be quickly turned down by the pinion handle; it may then be raised to regulate the light at pleasure.

3d. The paper shade being fixed on the wire frame that receives it, is then to be placed on the reservoir.

To Extinguish the Light turn the glass-holder quite down, and blow it out

N.B. Care must be taken to keep the lamp quite clean, and when not in use to empty the reservoir and burner.

Pale Southern Whale or Seal Oil, is preferable for these lamps to the best and more expensive Sperm Oil.

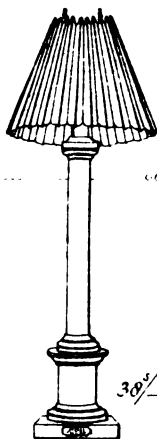

Should the Silk Thread of the Paper Shade break, replace it by one 19 inches long, to give it the correct shape.

ROBERT HOWARD AND CO.,

WHOLESALE MANUFACTURERS OF

ZINC WARES.

THE Malleable Sheet Zinc is recommended for lightness and durability, as superior to, and about half the price of Lead, and is particularly applicable for Sheathing Vessels, Roofing Houses and Buildings, Flats, Terraces, Pipes, Gutters, Verandas, Shop Fronts, Covering of Vaults, Lining Coffins, Packing Cases, Baths, Garden Engines, Coolers, Cisterns, Dairy Vats, and most Articles which can be manufactured in Copper, Lead, Tin, or Iron.

ZINC is more tenacious and lighter than lead. Its tenacity is represented by 109.8, while that of lead is 27.7 only. The density of Zinc is 7.190, and that of lead 11.352: that is to say, upon a given thickness, it is one-third lighter than lead, and resists four times as much as that metal; or it offers as much solidity as lead, with one-quarter of its thickness. Its weight is, then, one-sixth, and its cost one-half part of the latter only.

Zinc is two-thirds lighter than Slate, and fifteen times lighter than Tile. The Timber-work of roofs destined to support these latter materials must present similar proportions in strength, and consequently in expense. Besides, a Slate roof ought not to slant less than one-fifth, nor a Tile roof less than one-third, whereas the use of Zinc does not limit any declination. Therefore it is known that a roof inclined one-third has one-fifth more covering than the plane surface it is intended for. Zinc is soldered like Tin, with the same tools and solder, only care must be taken to take off its surface, with a steel scraper, and to wet it with a little Sal-ammoniac. Scraping the sheets may be avoided, by wetting the parts to be soldered with a mixture of Sal-ammoniac and Spirits of Salts. In order to fold it, or give it any required shape, it is lightly heated, so that when applied to it, saliva will boil up.

To Scour and clean the surface of Zinc, rub it with very fine sand, moistened with water, into which one-tenth or one-twelfth part of Vitriol, or Sulphuric Acid has been added. It soon becomes as white and bright as silver; but it is *indispensable to wash it immediately after with pure water*, in order to carry off the Acid, and then to rub it well with a dry cloth.
